

# The NWU-IT one-page strategy 2019-2023

How will IT be used across the NWU to achieve business success

IT will engage with all role-players. We will be governed by the IT Governance Committee. We will be advised & guided by internal advisors and a constituted IT committee. We will embrace the NWU dream, purpose + values.

This layer describes the driving forces behind our strategy which includes elements like the NWU strategy and success plan, the modern student, digital transformation, optimisation and many more.

It is important to understand that there are prerequisites to achieve your goals and to execute on the strategy. The university needs to be agile, digitally mature and have a digital culture, amongst a few. Without this basis we will fail.

IT needs to build a digital platform that will position the NWU as one of the best digitally transformed universities in South Africa. The digital experience should be designed to cater for the modern student. Differentiate and transform core business by digitisation, and optimise other capabilities and processes.  
 Establish stable and reliable infrastructure and build a integration platform that caters for speed, agility and flexibility.  
 Secure this platform from cyber threats by maturing the identification up to the recovery capabilities of the NWU.
