

Research Integrity and Artificial Intelligence

7th October | 9am

Potchefstroom
Campus

Facilitator: Kirstin Krauss

This **one-day in-person workshop** for emerging supervisors and scholarly librarians explores the impact of chatbots and **AI-driven** research support tools on scientific knowledge production. It covers AI's role in topic discovery, scholarly writing, assessment, theoretical elaboration, contextual relevance, and copyright issues.

The reality is that researchers, supervisors, and postgraduate students should remain vigilant and ethical, and continually seek ways to protect the relevance of scientific endeavours.

Workshop preparation requirements:

- Participants should bring along a draft research manuscript, e.g., a draft paper or thesis.
- Participants should bring along their own laptops and have access to the internet.
- Writefull and Endnote should be installed on participant PCs
