Dear Pilot Lecturer,

This week's **ACADEX Feature Spotlight**, highlights the **Grade Distribution and Class Statistics** feature available within the Grades tool. This feature allows students to view assessment statistics, including class averages and grade distributions, helping them better understand their performance within the context of the class.

When enabled, this functionality can:

- Promote transparency by displaying class averages for assessments.
- Provide students with meaningful context through grade distribution statistics.
- Encourage self-reflection and informed goal setting.
- Support student success by helping students identify opportunities for improvement.

The feature is quick and easy to activate within **Grades > Manage Grades** by enabling the options to display the class average and grade distribution to students. Once enabled, students can access these insights through the **View Statistics** option in the Grades area.

This is another example of how ACADEX can provide students with richer feedback and greater visibility into their academic progress, supporting a more transparent and engaging learning experience.

Kind regards,

The ACADEX Team
