Dear Pilot Lecturers,

This week's ACADEX Feature Spotlight introduces **Lumi Study Support**, a feature that can help provide targeted academic support to students based on their quiz performance.

Lumi Study Support uses the course content you have already created in ACADEX to direct students to relevant learning materials when they answer quiz questions incorrectly. By providing personalised recommendations linked to areas where students need additional support, the feature encourages independent learning and helps students focus their revision efforts more effectively.

As students prepare for tests and examinations, Lumi Study Support can play an important role in helping them identify knowledge gaps, revisit relevant learning materials, and strengthen their understanding of key concepts before formal assessments. While you get the insights at a glance.

The feature is intended to support students by:

- Providing personalised guidance based on quiz attempts.
- Directing students to relevant course resources for remedial learning.
- Encouraging greater student independence and self-directed study.
- Supporting improved alignment between learning activities, outcomes, and assessment preparation.

If you would like to use this feature in your modules, please refer to the **SOP – Lumi Study Support,** included in the attached Feature Spotlight, for detailed guidance on enabling and configuring it.

Key takeaway: LUMI Study Support helps students identify areas where they need further review and directs them to relevant course content for additional support, making it a valuable resource for ongoing learning and exam preparation.

Kind regards,

The ACADEX Project Team
